

## XETAL @BED

@Bed is an effective tool to prevent dangerous situations possibly leading to a fall. It detects when a patient gets on or off the bed without the need for he or she to wear or carry something like a bracelet. @Bed can be connected to any nurse call system or used with the integrated GSM making it suitable even for private use. Its design enables fast and easy usage with professional reliability with no need for special skills.

## WHY CHOOSE @BED

### LESS FALLS

@bed can detect what happens on and near the bed. In this way it makes possible to generate an alarm before a fall happens.

### LESS WORRIES

@bed allows nurses to act quickly when needed in order to avoid an accident. Quality of life of the patient and his family are, therefore, improved.

### BEST IN RELIABILITY

@bed has been extensively tested in Belgian hospitals, where it has proved to be an effective tool to prevent falls, superior to what previously available.

## About Xetal

Xetal is a pioneer in patient prevention and monitoring systems not requiring a person to wear or carry a device such as a bracelet or a phone.

Its patent-pending technology allows to precisely and timely detect behaviours without invading privacy. This allows to greatly improve quality of life for patients, elderly people, and anybody in need of local and remote monitoring.
